

Environment & Quality Policy

Our mission is to help educators and students to flourish, both today and tomorrow. We offer inspiration and provide products that preschools and schools need in order to develop their learning environments. These products have, over the years, been clearly focused on quality, safety (both in chemical and mechanical terms), the environment and preschool and school curricula. A long-term environmental approach, with environmentally adjusted processes and procedures, plays an important role in learning environments. As a Lekolar partner, it is extremely important to carry on business activities that are socially, ethically, environmentally and economically sustainable.

Lekolar will therefore:

Constantly develop and improve products and services and adapt them to the needs of our stakeholders in order to maintain and strengthen the trust that our customers, suppliers and employees place in us.

Carry on systematic quality work as part of a dialogue with our customers and stakeholders. Together, we are creating a committed, knowledgeable organisation that constantly helps develop our business activities according to set goals and policies.

Develop employees' skills and train them to create a stimulating work environment in which every employee is aware of our quality and environmental goals.

Choose our suppliers with the utmost care and with the focus very much on long-term supplier collaborations with clear, measurable quality goals.

See laws and statutes as minimum requirements which must be exceeded.

Take into account the most significant environmental aspects in our business activities.

Promote non-toxic, environmentally sustainable development by taking economically reasonable action to limit the company's impact on the environment. And actively promote a circular range in which recycling and restoration form a natural part of product development.

Consider environmental work as a process of continuous improvement in which the use of life-cycle analyses plays an important part.

Based on this policy, establish objectives that must be continually revised in order to adapt them to existing circumstances, risks and new experiences in the environmental field.
