

QUALITY POLICY

Lekolar AB has, since the foundation for more than 40 years ago, provided schools and preschools with products. These products have over the years, had a clear focus on quality, environment and preschool and school curriculums.

By constantly developing and improving our products and services in order to meet not only the present but also future needs of our customers, we will maintain and strengthen the confidence of our customers, suppliers and employees. Quality is our most competitive instrument, and the main objective of our quality work is an increased customer benefit. Through a systematic approach with complaints and in dialogue with our customers, which is documented, we are creating a dedicated and knowledgeable organization that continuously improves our operations.

The most essential resource in Lekolar is our employees. Education and development of all our employees as well as a stimulating working environment, where every employee is familiar with our quality and environmental goals, is one of the most important areas in order to help all employees to work in a correct and responsible way.

We choose our suppliers with greatest care and with a strong focus on having a long-term relationship as well as a close cooperation with clear and measurable quality objectives. As a supplier to Lekolar, it is extremely important to have a business that is socially, ethically, environmentally and economically sustainable.
